

# **TEST METHODS FOR EVALUATING EXISTING FOUNDATIONS**

**Document no:** FPA-SC-02

**Developed by:** FPA Structural Committee

**Committee chairs:** Main Committee - Ron Kelm, P.E.  
Subcommittee - Al Bustamante, P.E.

**Subcommittee:** Gerard Duhon, Denis Hanys, Ron Kelm,  
Gerard Lowe, Bob Newman, Michael Skoller,  
George Wozny, Nicole Wylie

**Presented by:** Al Bustamante, P.E.,  
Wiss, Janney, Elstner Associates, Inc.

**Presented to:** Foundation Performance Association

**Presented on:** August 11, 2010

*Al Bustamante, Wiss, Janney, Elstner  
Associates, Inc.*

# OUTLINE

- Introduction
- Test Methods
- Foundation Characteristics and Defects
- Summary Table
- Case Study - Slab-on-Ground Cracking
- Key resources
- Conclusions

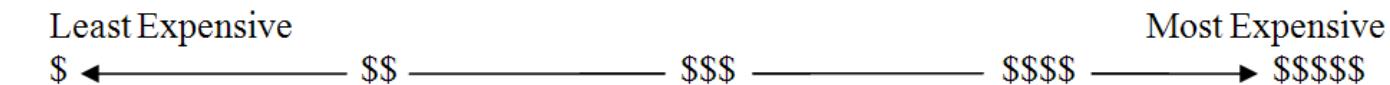

# Introduction

- Scope
  - Document type - general guideline
  - Audience - Engineers
  - Type of foundation - lightly loaded foundations and pavement
  - Material - concrete
  - Geographic boundary – Houston
  - Safety issues – not addressed

# Introduction

- General Considerations

- Cost

- Rental
  - Equipment
  - Professional services
- Calibration
  - Test results
  - Proprietary equipment
- Test methods - not all-inclusive

# Introduction

- Format
  - General description
  - General applications
  - Some considerations
  - Relative cost
  - Additional resources

# Test Methods

*Al Bustamante, Wiss, Janney, Elstner  
Associates, Inc.*

# Test Methods – Carpenter Level

- Confirm elevation survey
- Levelness
- Plumb

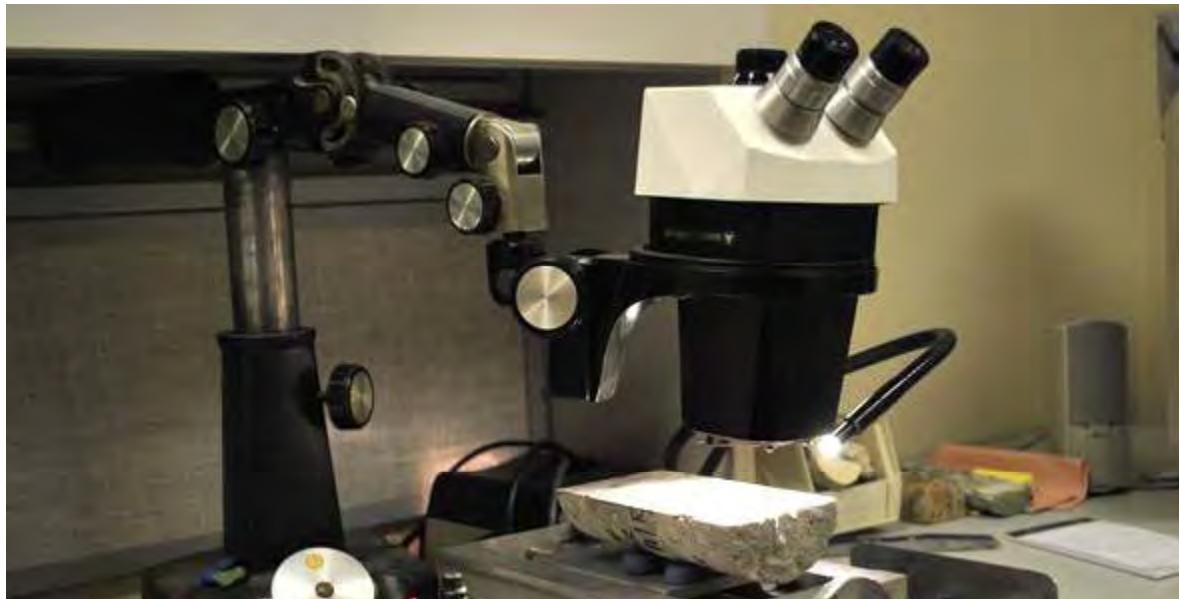

# Test Methods – Chain Dragging

- Estimate location and extent of delamination

# Test Methods – Chloride Content

- Analyze for chlorides at the level of steel reinforcement

# Test Methods – Concrete Cores

- Testing - Compressive strength
- Confirm dimensions
- Petrographic analysis

*Al Bustamante, Wiss, Janney, Elstner  
Associates, Inc.*

# Test Methods – Concrete Screwdriver Test

- Relative hardness and durability

*Al Bustamante, Wiss, Janney, Elstner  
Associates, Inc.*

# Test Methods – Geotechnical

- Causes and extent of foundation movement

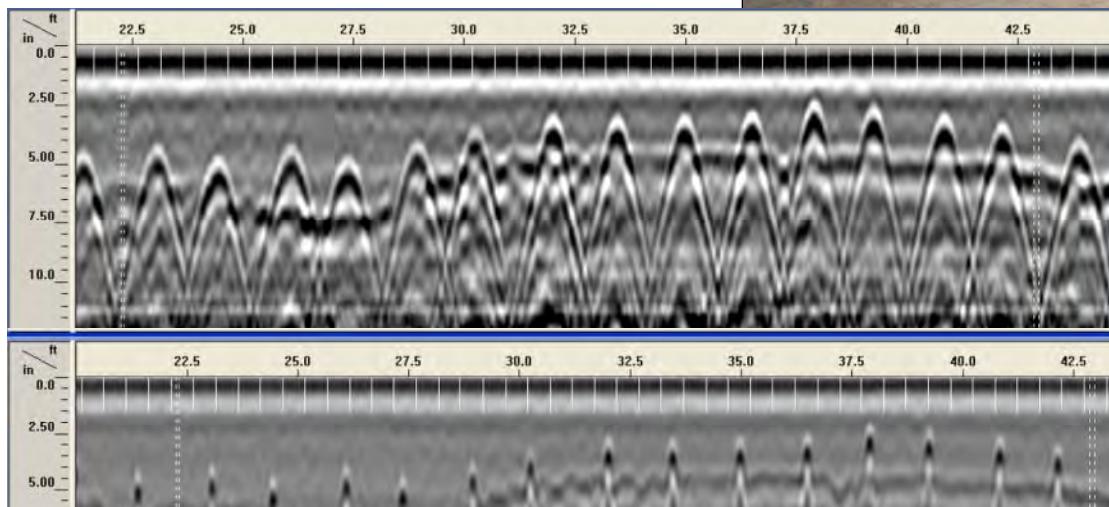

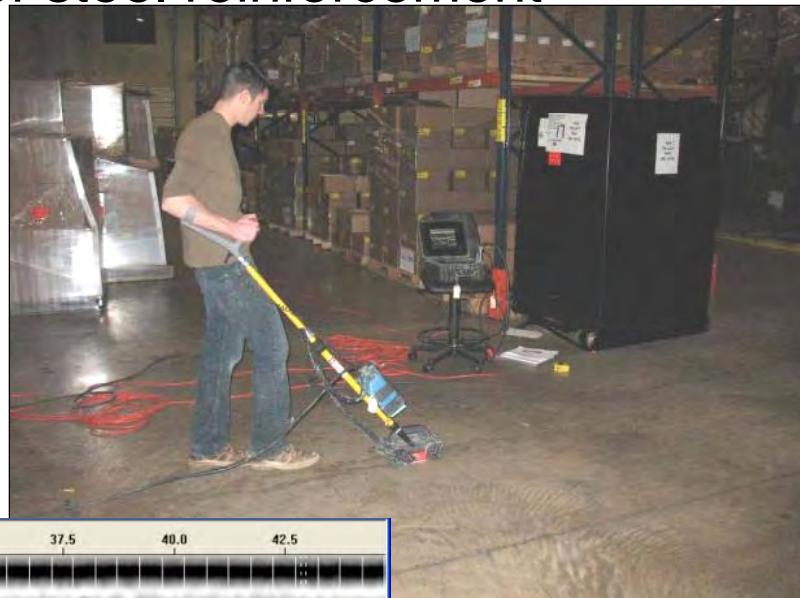

# Test Methods – Geotechnical

- Classify soil types
- Measure soil strength
- Report Atterburg limits
- Moisture content
- Ground water level
- Compaction
- Shear strength
- Active zone depth
- Swell potential
- Potential vertical movement (PVM)

# Test Methods – Ground Penetrating Radar

- Location, depth, spacing of steel reinforcement
- Presence of utility lines
- Voids underneath a slab
- Delamination
- Slab thickness
- Soil strata

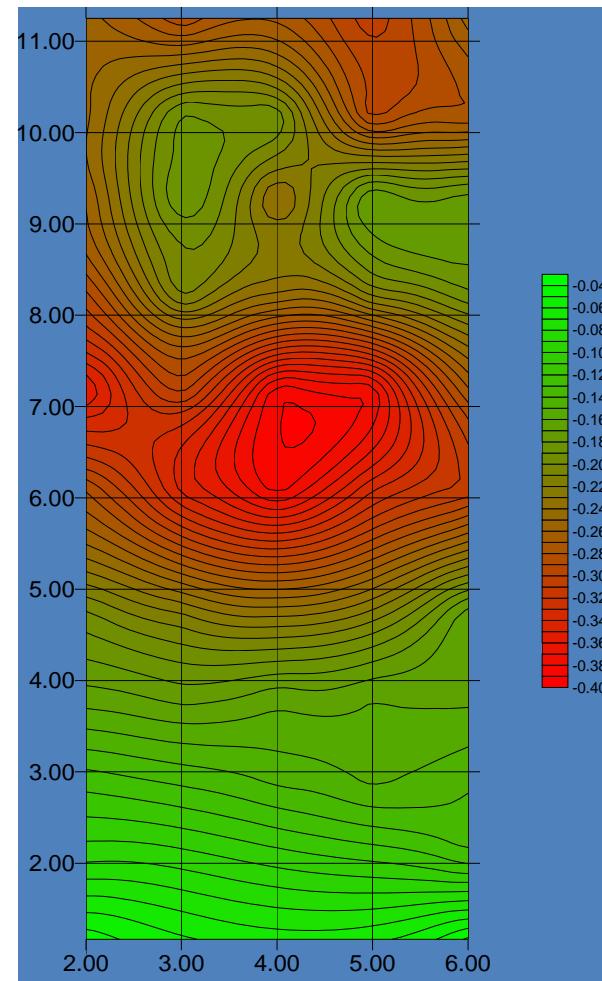

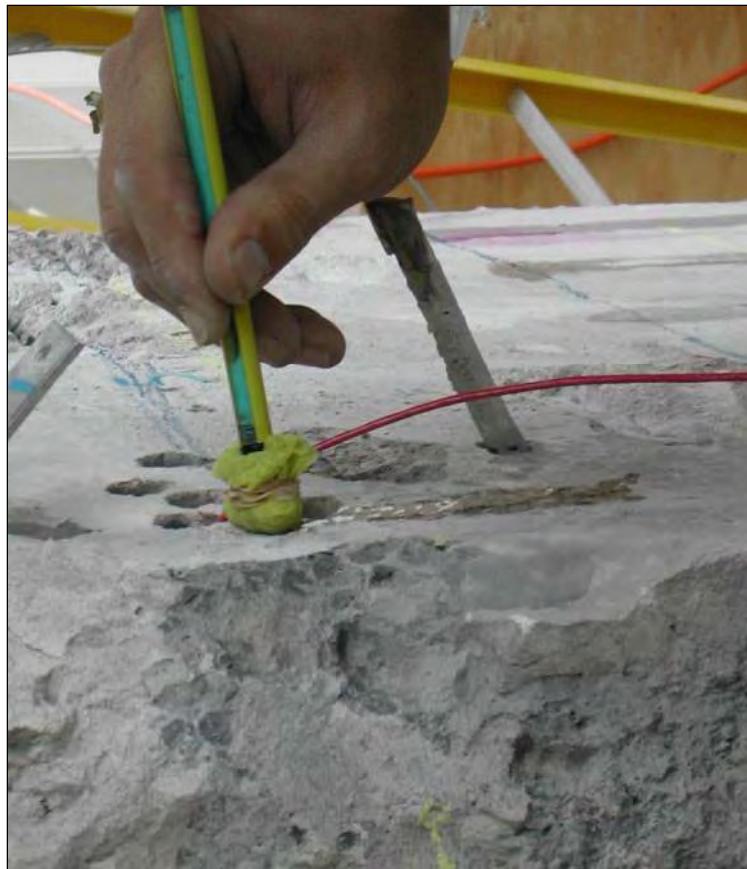

# Test Methods – Ground Probing

- Depth of perimeter grade beams
- Soil type and color
- Soil moisture condition
- Relative soil shear strength

# Test Methods – Half Cell Potential

- Probability of steel reinforcement corrosion

*Al Bustamante, Wiss, Janney, Elstner  
Associates, Inc.*

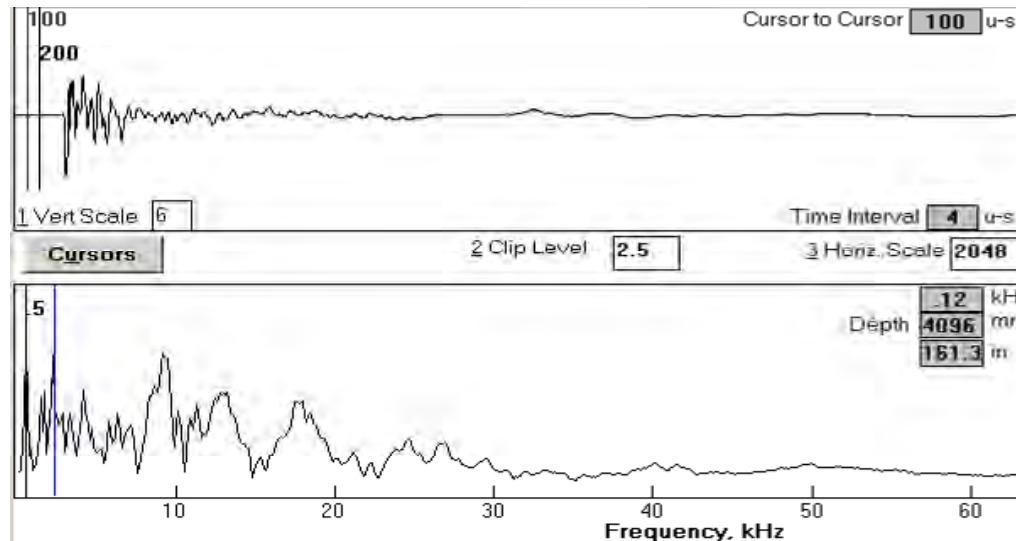

# Test Methods – Hammer Sounding

- Presence of delamination and voids

# Test Methods – Impact Echo

- Delamination
- Internal voids
- Honeycombs
- Voids underneath a slab

# Test Methods – Inspection Openings and Excavations

Inspection opening

Test pit excavation

# Test Methods – Inspection Openings and Excavations

- Inspection opening
  - Size and placement of steel reinforcement
  - Presence of vapor retarder below a slab
  - Slab thickness
- Excavations
  - Grade beam and bell pier dimensions
  - Presence of plumbing lines
  - Free water elevation and condition of fill

# Test Methods – Laser Level

- Floor elevations

# Test Methods – Manometer

- Floor elevations

**Closed Liquid/Gas**

**Water**

*Al Bustamante, Wiss, Janney, Elstner  
Associates, Inc.*

# Test Methods – Metal Detector

- Presence and general location of steel reinforcement

# Test Methods – Optical Level

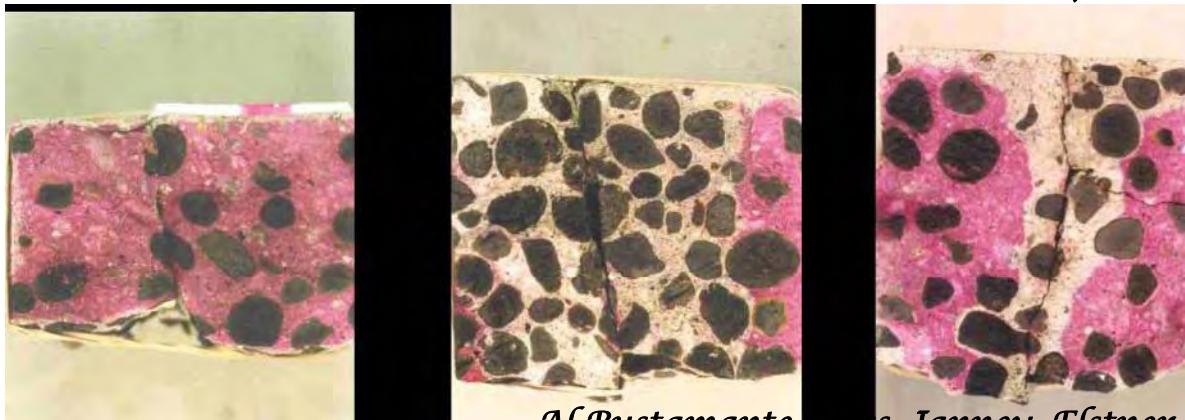

- Floor elevation

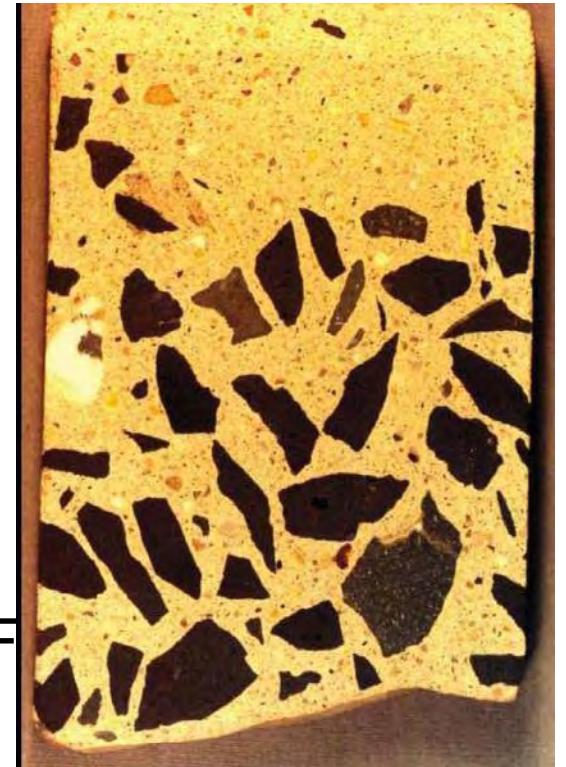

*Al Bustamante, Wiss, Janney, Elstner  
Associates, Inc.*

# Test Methods – Petrographic Examinations

- Coarse aggregate segregation
- Air voids
- Poor curing
- Relative water cementitious ratio
- Relative age of cracks
- Type of cracks
- Detrimental chemical reactions – ASR, DEF

*Al Bustamante, Wiss, Janney, Elstner  
Associates, Inc.*

# Test Methods – Plumbing Leak Detection

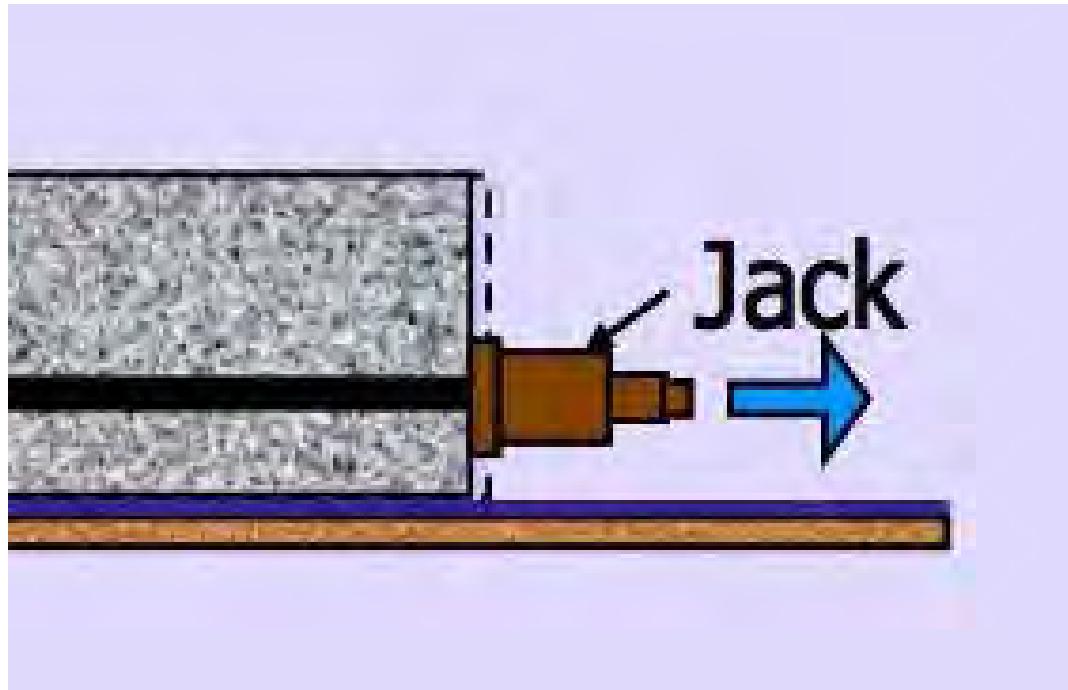

- Foundation movement due to below slab water leaks

*Al Bustamante, Wiss, Janney, Elstner  
Associates, Inc.*

# Test Methods – Post-tension Lift-Off

- Measure effective tendon force in unbonded post-tensioned tendons

## Test Methods – Post-tension Screwdriver Penetration

- Evaluate presence of tension in post-tensioned tendons

# Test Methods – Rebound Hammer

- Relative hardness of concrete

*Al Bustamante, Wiss, Janney, Elstner  
Associates, Inc.*

# Test Methods – Reinforcement Locator

- Spacing, size, and depth of steel reinforcement

*Al Bustamante, Wiss, Janney, Elstner  
Associates, Inc.*

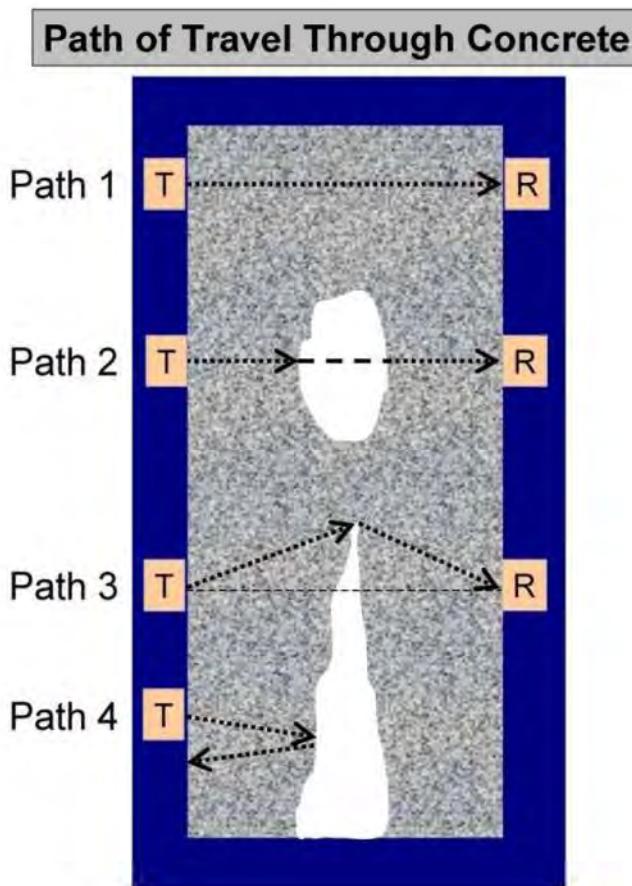

# Test Methods – Resistivity

- Evaluate effects of
  - Location of pre-existing ponds, foundation, lakes, etc
  - Accumulation of ground water
  - Plumbing leaks
  - Poor drainage
  - Location of pipes
  - Soil strata variations
  - Tree root zones

# Test Methods – Ultrasonic Pulse Velocity

- Internal cracking
- Voids
- Honeycomb

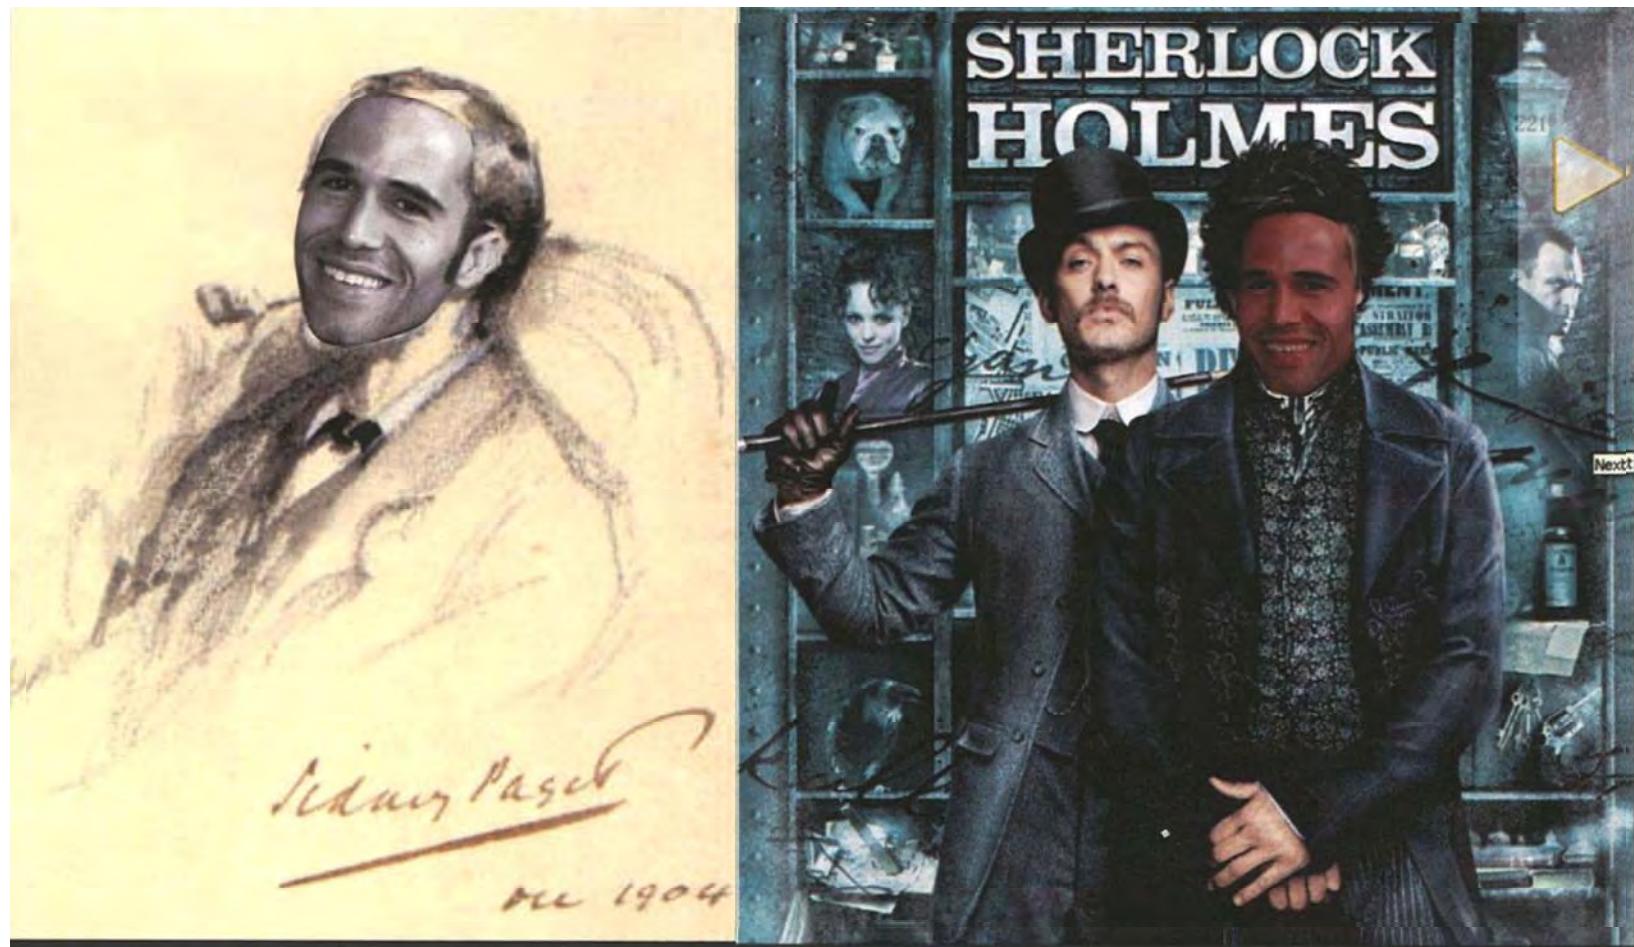

# Test Methods – Vapor Transmission

- Adequacy of slab-on-ground to receive floor finishes

# Test Methods – Visual

*Al Bustamante, Wiss, Janney, Elstner  
Associates, Inc.*

## Test Methods – Visual

- Apparent damages
- Drainage
- Movement of flatwork
- Moisture conditions
- Soil condition
- Trees
- Topography
- Condition of exposed portion of foundations

# Foundation Characteristics and Defects

# Foundation Characteristics

- Concrete dimensional properties
- Concrete distress
  - Cracking
  - Delamination
  - Detrimental chemical reactions
  - Honeycombing
  - Joint deficiencies
  - Slab curling and warping
  - Spalling

*Al Bustamante, Wiss, Janney, Elstner  
Associates, Inc.*

# Foundation Characteristics

- Concrete material properties
  - Air entrainment
  - Chloride content
  - Compressive strength
  - Durability
  - Hardness
  - Unit weight
  - Water cementitious ratio

# Foundation Characteristics

- Post-tensioned reinforcement characteristics
  - Anchorages
  - Grease
  - Sheathing
  - Strand
  - Tendon
  - Tendon profile

# Foundation Characteristics

- Soil characteristics
  - Moisture content
  - Plasticity index
  - Soil shear strength
  - Soil strata location
  - Soil type and color
  - Tree root
  - Water table presence/location

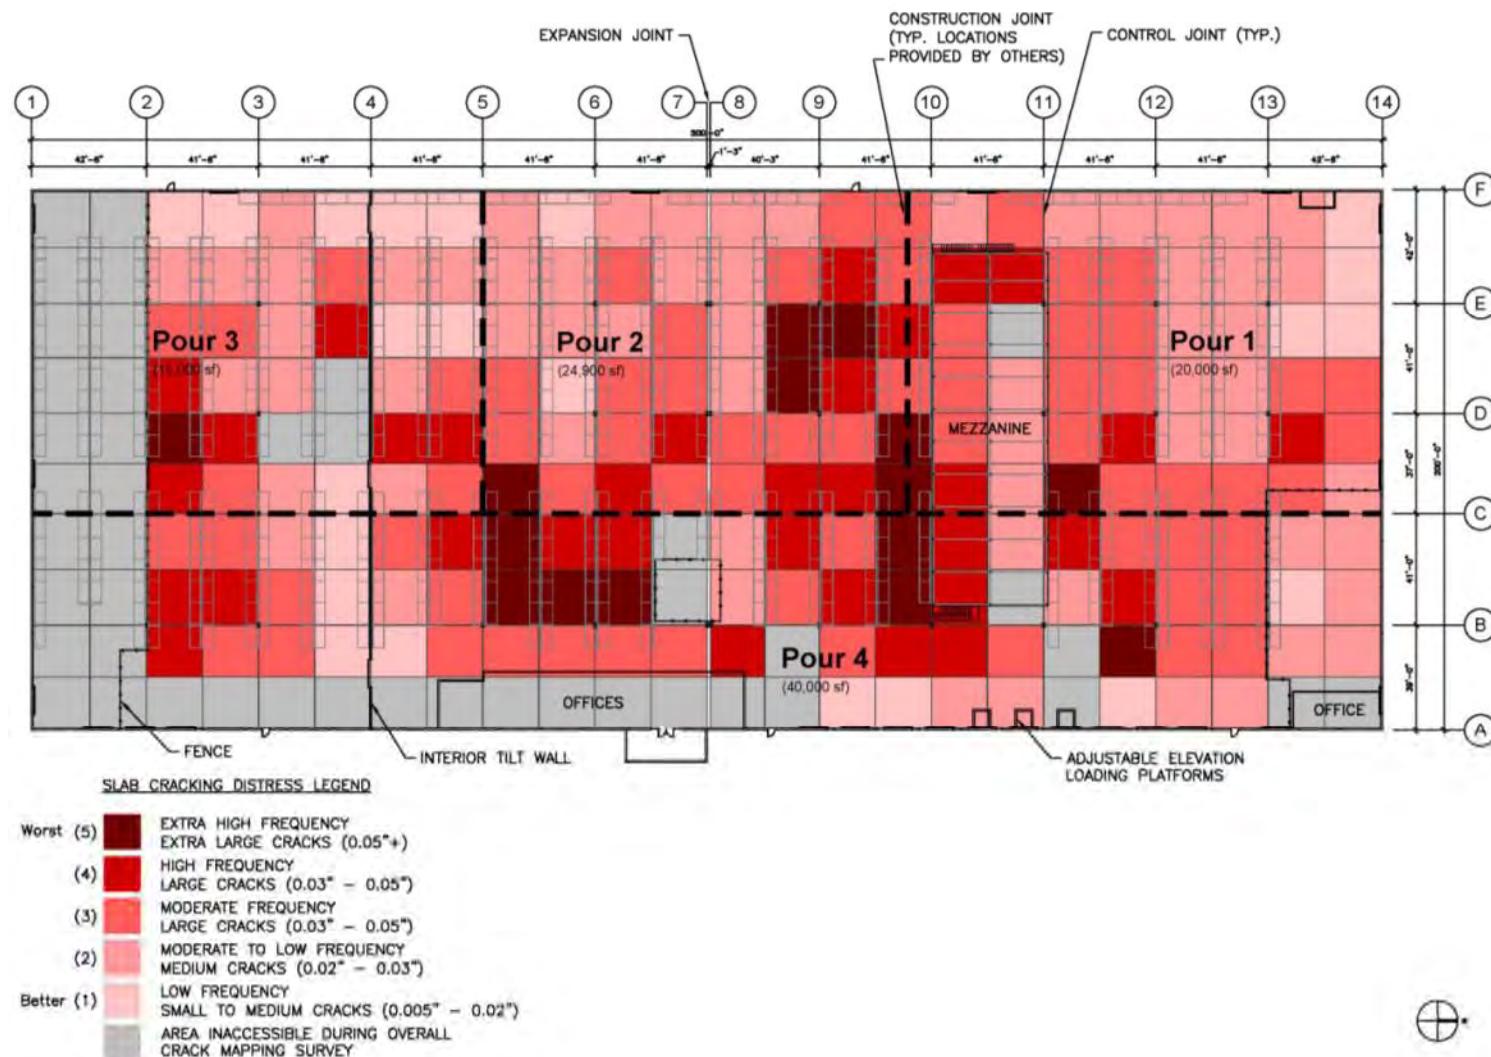

# Summary Table

		Characteristics and Deficiencies		Test Methods																									
				2.1	2.2	2.3	2.4	2.5	2.6	2.7	2.8	2.9	2.10	2.11	2.12	2.13	2.14	2.15	2.16	2.17	2.18	2.19	2.20	2.21	2.22	2.23	2.24	2.25	2.26
3.1	Concrete Dimensional Properties	Grade beam dimensions																											
		Pier dimensions																											
		Slab levelness and flatness	●																										
		Slab thickness		●		●	●				●	●			●	●	●	●	●	●									
		Coarse aggregate segregation		●																									
		Cracking/types of cracking																											
		Delamination	●				●		●																				
		Detrimental chemical reactions																	●	●

# Case Study

*Al Bustamante, Wiss, Janney, Elstner  
Associates, Inc.*

# Case Study – Slab-on-Ground Cracking

*Al Bustamante, Wiss, Janney, Elstner  
Associates, Inc.*

## Case Study

- Warehouse located in Houston, TX
- Reinforced concrete slab-on-ground
  - 6" thick
  - Vapor retarder below slab-on-ground
  - No. 4 bars at 18" o.c. each way
  - Control joint spacing at ~ 21' o.c.

# Case Study – Slab Cracking

*View of a typical aisle in the east-west direction.*

*Crack previously repaired with epoxy injection  
Al Bustamante, Wiss, Janney, Elstner  
Associates, Inc.*

# Case Study – Slab Cracking

*Typical cracks located roughly in the middle of an aisle*

*Random crack pattern*

# Case Study – Slab Cracking

*View of a crack pattern thought to be from a crane load stabilization point*

*Surface crazing cracking*

*Al Bustamante, Wiss, Janney, Elstner  
Associates, Inc.*

# Case Study – Spalling

*Surface spall next to a pallet*

*Spall at edge of new concrete placed at equipment at overhead door (see arrow)*

# Case Study – Joint Distress

*Spall and cracks at control joint*

*Missing control joint material (arrow)*

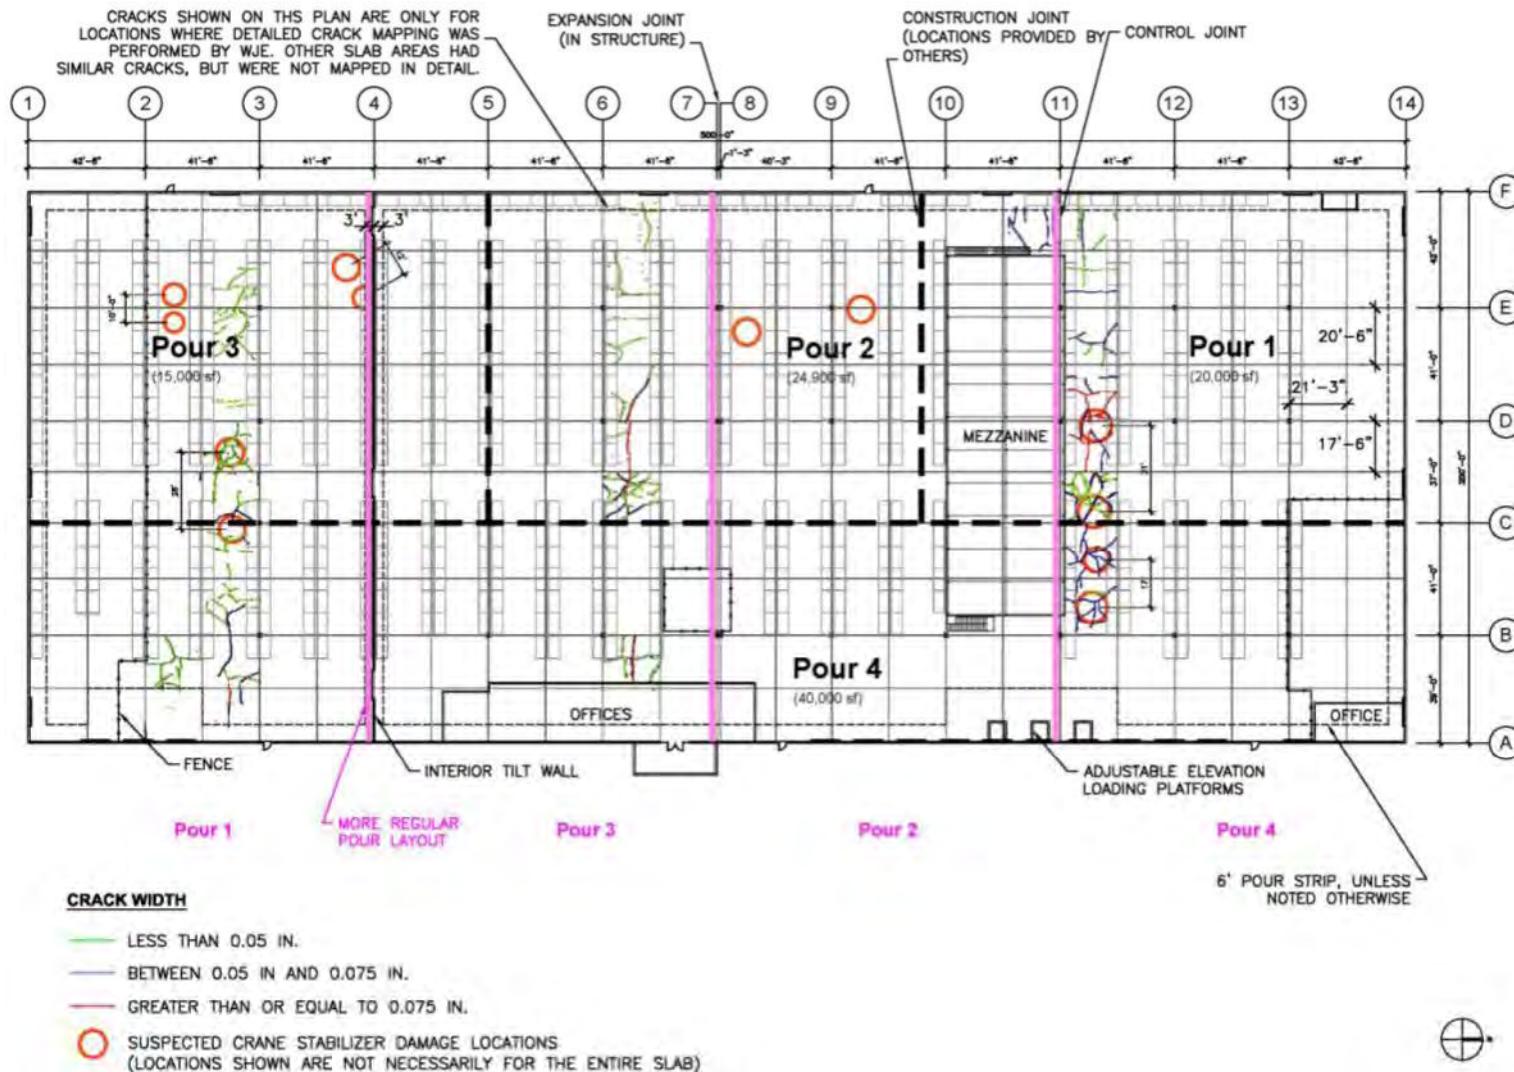

# Case Study – Crack Mapping

*Grid layout for detailed crack mapping area*

*Al Bustamante, Wiss, Janney, Elstner  
Associates, Inc.*

# Case Study – Crack Mapping

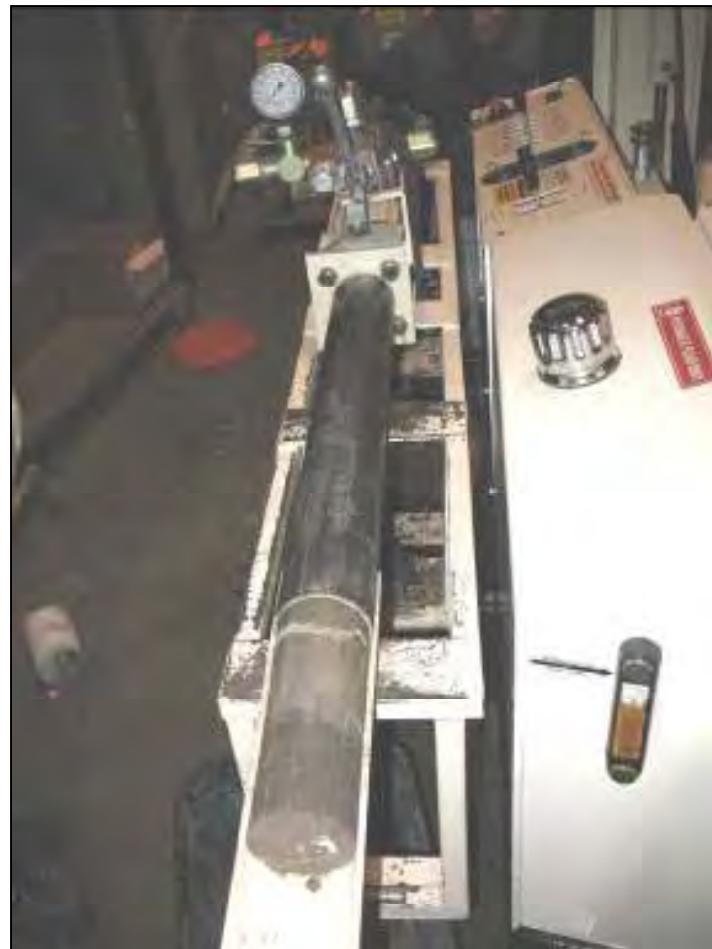

*Al Bustamante, Wiss, Janney, Elstner  
Associates, Inc.*

# Case Study – Concrete Core Extraction

*Al Bustamante, Wiss, Janney, Elstner  
Associates, Inc.*

# Case Study – Soil Boring

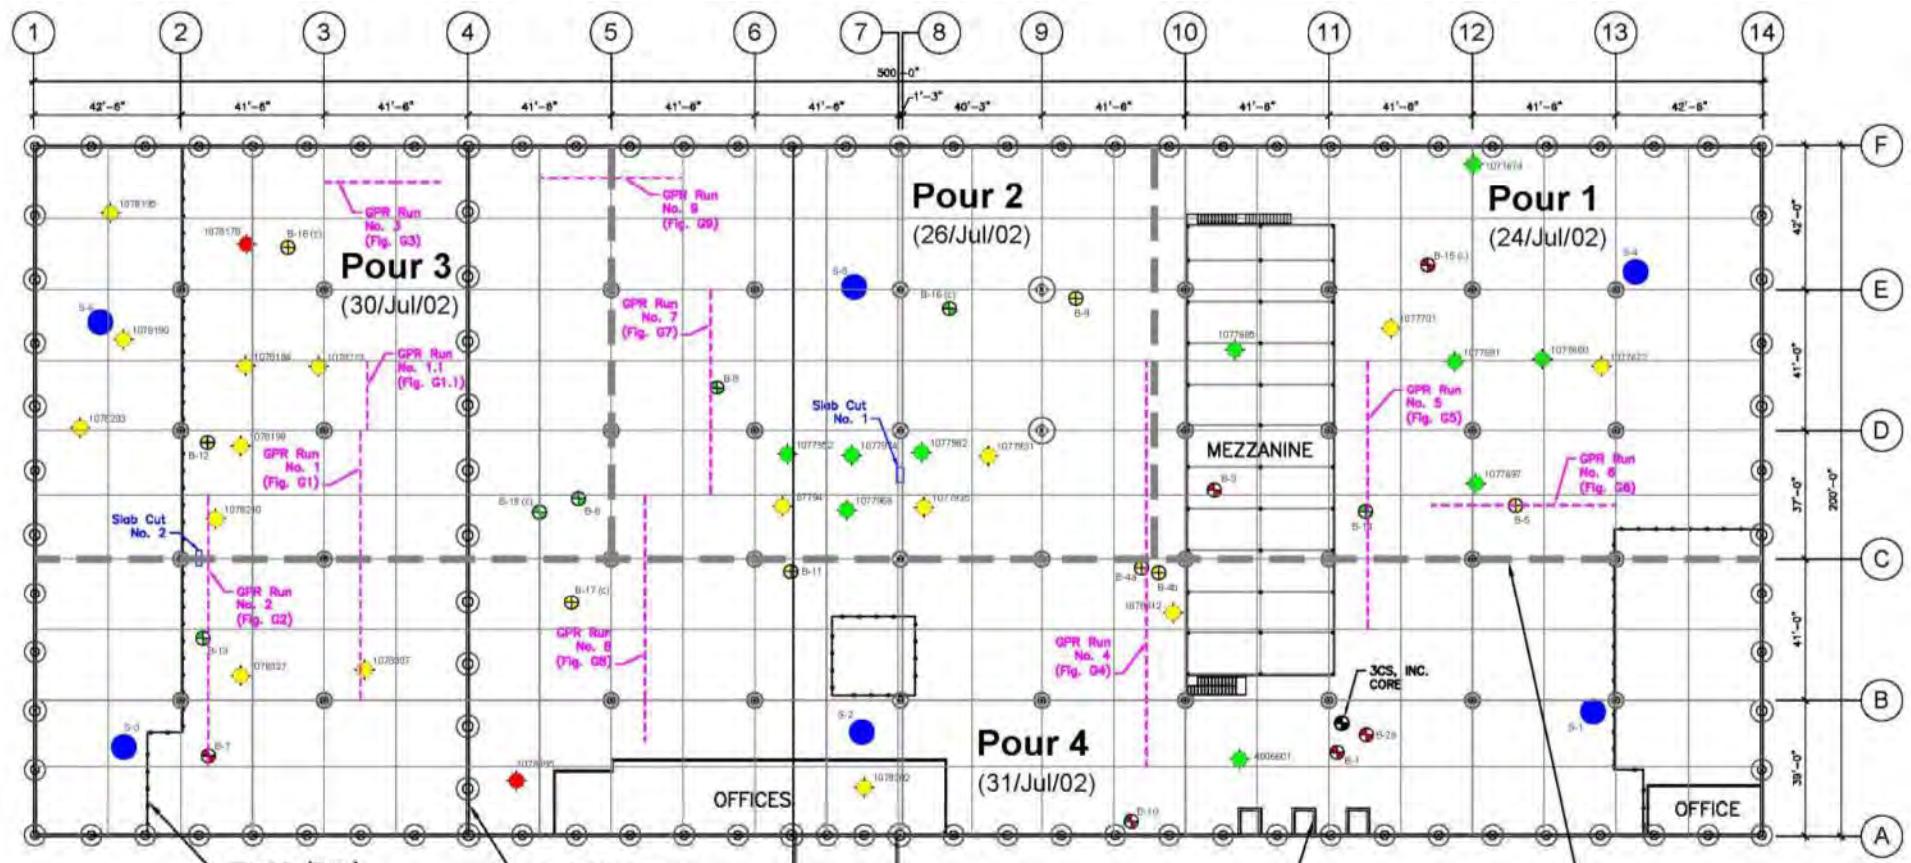

*Al Bustamante, Wiss, Janney, Elstner  
Associates, Inc.*

# Case Study – Inspection Opening

*Rebar located at the bottom of the slab. Note no cracking propagating from bottom of the control joint. (arrow).*

# Case Study – GPR Testing

*Al Bustamante, Wiss, Janney, Elstner  
Associates, Inc.*

# Case Study – GPR Testing

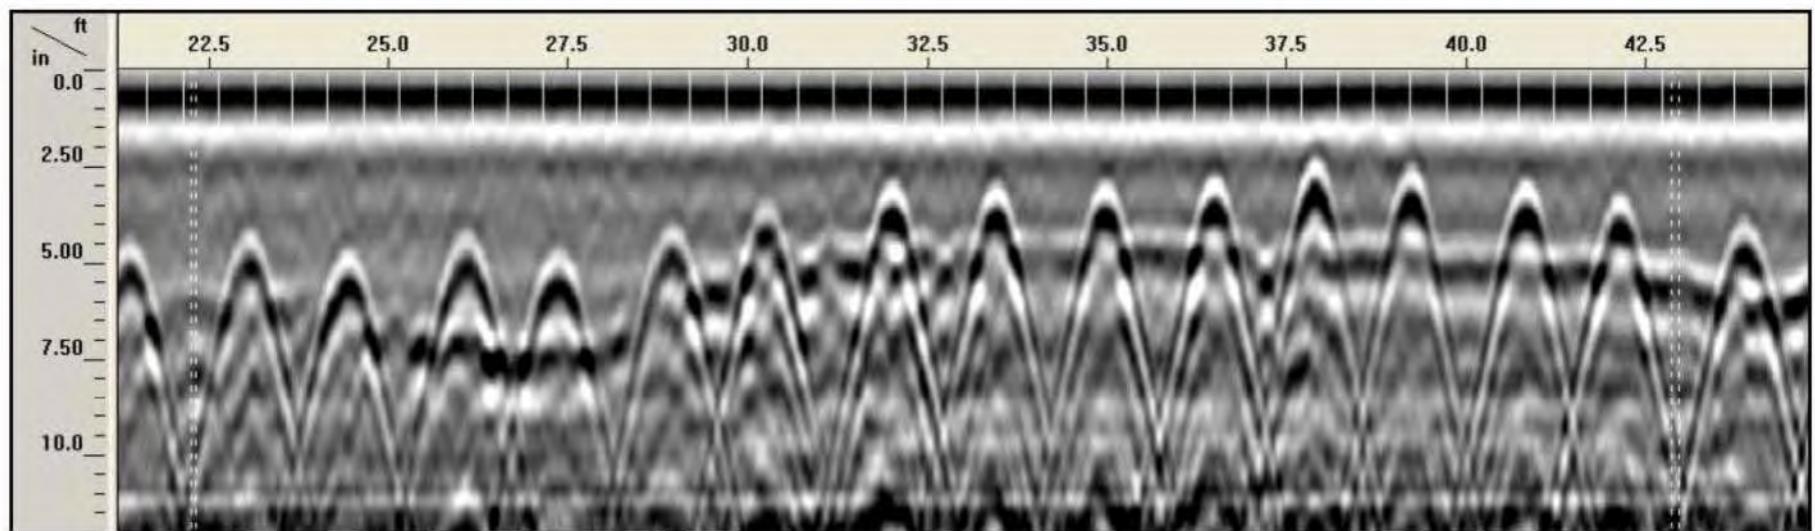

Figure 3. Original GPR Signal: Note variances in rebar and slab depths.

# Case Study – GPR Testing

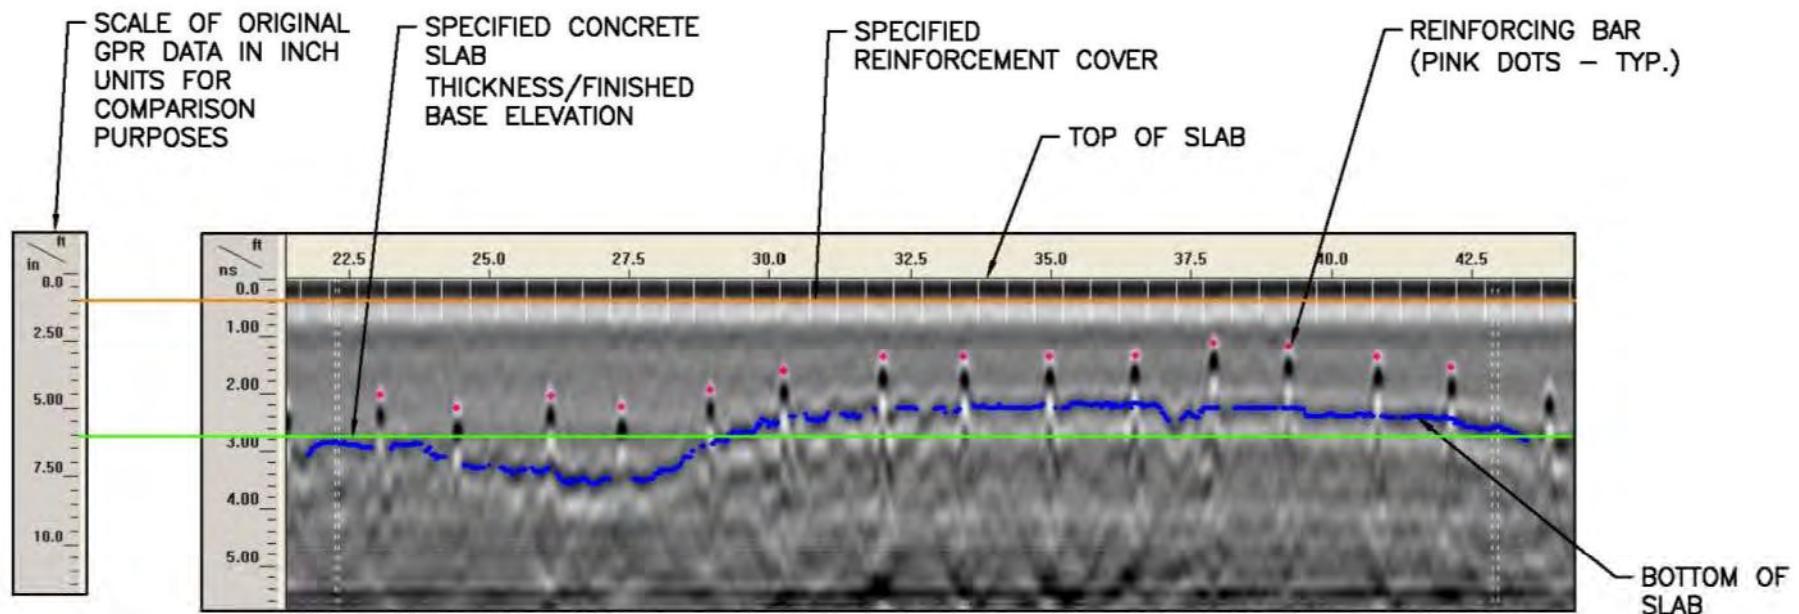

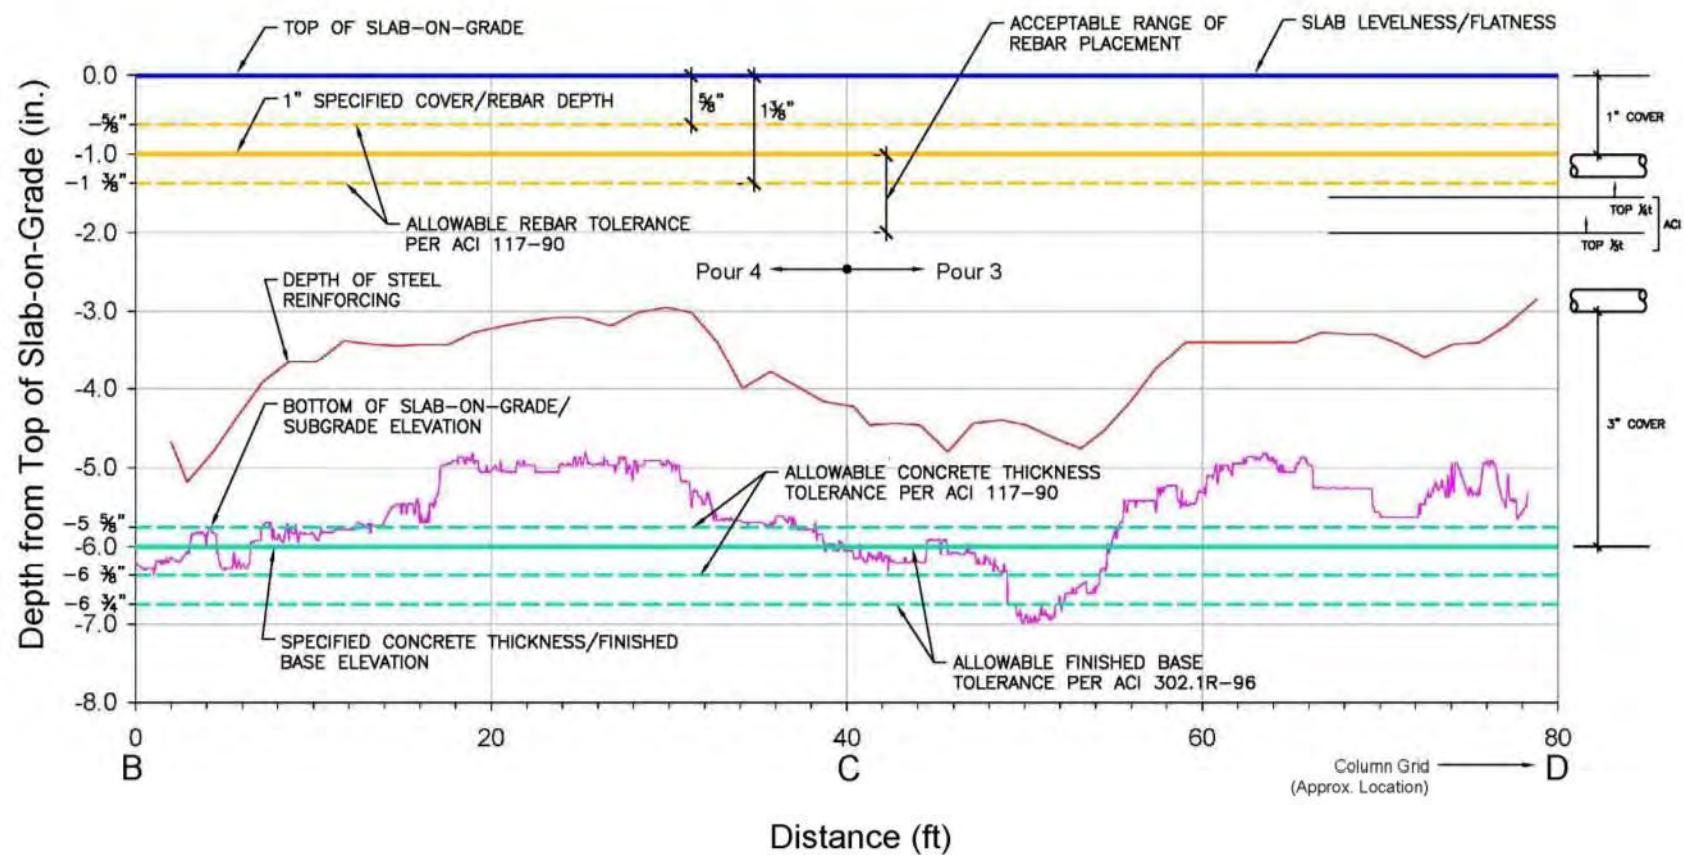

Figure 4. Migrated Data: Data points are shown for top of rebar (pink) and for bottom of the slab (blue).

# Case Study – GPR Testing

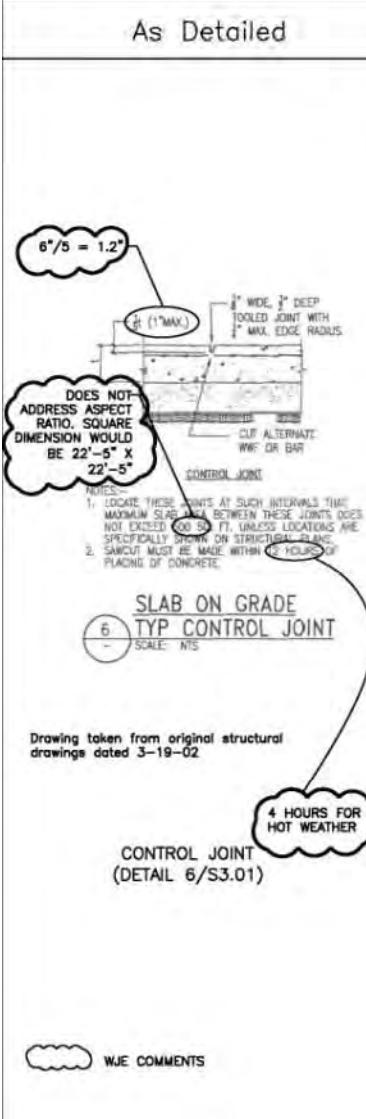

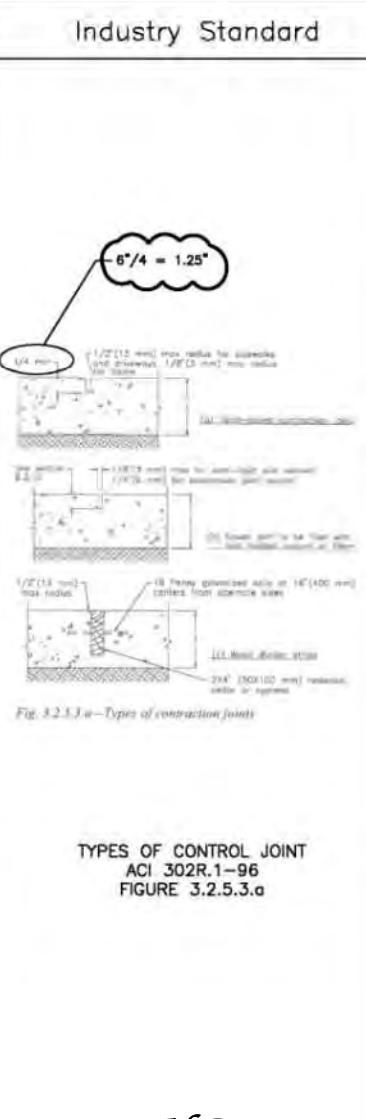

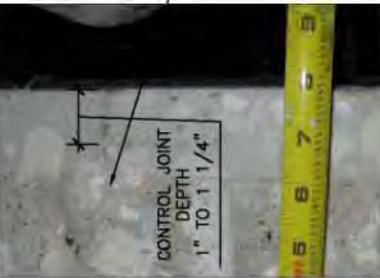

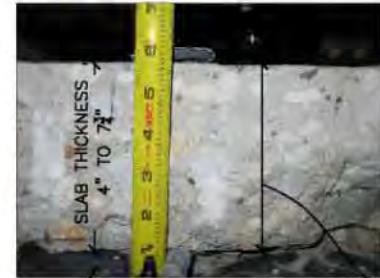

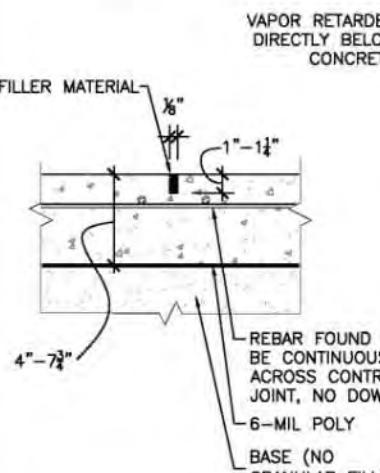

GPR Data - Run No. 1 (East-West at Grid 3.3)

Refer to Fig. P3 for Location of GPR Runs

# Case Study – Design and Construction Deficiencies

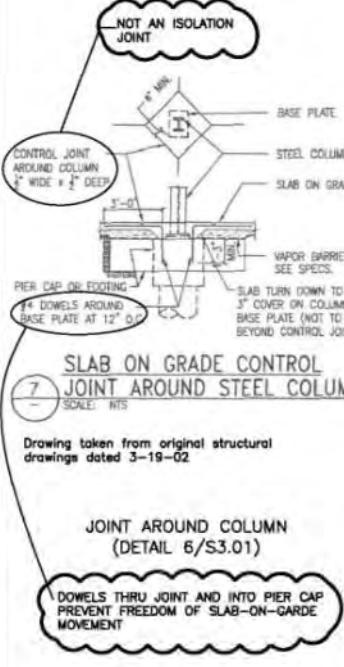

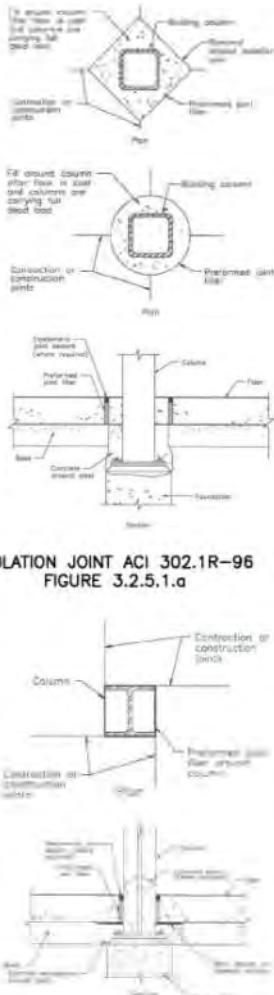

## Control (Contraction) Joints

As Detailed	Industry Standard	As-Built
 <p>6" / 5 = 1.2"</p> <p>6" wide, 3" deep tooled joint with 1" max. edge radius.</p> <p>CUT ALTERNATE W/ OF BAR</p> <p>DOES NOT ADDRESS ASPECT RATIO. SQUARE DIMENSION WOULD BE 22'-5" X 22'-5".</p> <p>NOTE: 1. LOCATE THESE JOINTS AT SUCH INTERVALS THAT MAXIMUM SLAB AREA BETWEEN THESE JOINTS DOES NOT EXCEED 200 SF. UNLESS LOCATIONS ARE SPECIFICALLY SHOWN ON STRUCTURAL PLANS, SAWCUT MUST BE MADE WITHIN 4 HOURS OF PLACING OF CONCRETE.</p> <p><b>SLAB ON GRADE TYP CONTROL JOINT</b></p> <p>SCALE: NTS</p> <p>Drawing taken from original structural drawings dated 3-19-02.</p> <p>CONTROL JOINT (DETAIL 6/S3.01)</p> <p>4 HOURS FOR HOT WEATHER</p> <p>WJE COMMENTS</p>	 <p>6" / 4 = 1.25"</p> <p>1/4 in. max. depth for sawing and discontinuous 1/8" (3 mm) min. radius.</p> <p>1/2" (13 mm) max. radius for sawing and discontinuous 1/8" (3 mm) min. radius.</p> <p>(A) Saw cut to be made with continuous saw.</p> <p>(B) Saw cut to be made with hand saw.</p> <p>(C) Saw cut to be made with power saw.</p> <p>Fig. 3.2.5.3-a—Types of contraction joints</p> <p>TYPES OF CONTROL JOINT ACI 302R.1-96 FIGURE 3.2.5.3-a</p>	<p>NOTE THAT THERE IS NO CRACK BELOW CONTROL JOINT. THIS INDICATES SAW CUTS WERE MADE TOO LATE</p>  <p>TYPICAL CONTROL JOINT (PHOTOGRAPH TAKEN AT WEST END OF SLAB CUT #2)</p>  <p>SLAB THICKNESS 4" TO 7"</p> <p>REINFORCEMENT COVER 1" TO 6" FROM TOP OF SLAB</p> <p>TYPICAL SLAB SECTION (PHOTOGRAPH TAKEN AT SOUTH END OF SLAB CUT #2)</p>  <p>VAPOR RETARDER DIRECTLY BELOW CONCRETE</p>  <p>FILLER MATERIAL</p> <p>4"-7 1/4"</p> <p>1"-1 1/4"</p> <p>REBAR FOUND TO BE CONTINUOUS ACROSS CONTROL JOINT, NO DOWELS</p> <p>6-MIL POLY</p> <p>BASE (NO GRANULAR FILL)</p> <p>CONTROL JOINT</p> <p>REINFORCING AT SLAB CUT #2 (APPROX GRID C, 2.2)</p>

*Al Bustamante, Wiss, Janney, Elstner  
Associates, Inc.*

# Case Study – Design and Construction Deficiencies

## Isolation Joint

As Detailed	Industry Standard	As-Built
 <p><b>NOT AN ISOLATION JOINT</b></p> <p><b>CONTROL JOINT AROUND COLUMN</b> 1/2" WIDE X 1/2" DEEP</p> <p>STEEL COLUMN</p> <p>SLAB ON GRADE</p> <p>VAPOR BARRIER SEE SPECS.</p> <p>PIER CAP OR FOOTING</p> <p>7 DOWELS AROUND BASE PLATE AT 12" O.C.</p> <p><b>SLAB ON GRADE CONTROL</b></p> <p><b>JOINT AROUND STEEL COLUMN</b> (DETAIL 6/S3.01)</p> <p>Drawing taken from original structural drawings dated 3-19-02</p> <p>JOINT AROUND COLUMN (DETAIL 6/S3.01)</p> <p>DOWELS THRU JOINT AND INTO PIER CAP PREVENT FREEDOM OF SLAB-ON-GRADE MOVEMENT</p> <p>WJE COMMENTS</p>	 <p>ISOLATION JOINT ACI 302.1R-96 FIGURE 3.2.5.1.a</p> <p>ISOLATION JOINT ACI 302.1R-96 FIGURE 3.2.5.1.b</p>	 <p>DOUBLE COLUMN AT BUILDING EXPANSION JOINT</p> <p>ABSENCE OF ISOLATION JOINT BETWEEN COLUMN DIAMOND SHAPE BLOCK-OUT AND SLAB-ON-GRADE</p> <p>BLOCK-OUT CORNER DOES NOT ALIGN WITH MAIN FLOOR JOINT</p> <p>NOT AN EXPANSION JOINT (SEE FIG. D-4)</p> <p>DIAMOND SHAPE JOINT AT DOUBLE COLUMN BUILDING STRUCTURE EXPANSION JOINT</p>
